

CHAPTER V:

LESSON 1

LEARNING OUTCOME 1:

**PERFORM MISE' EN
PLACE**

Objectives

At the end of the lesson, you are expected to:

- 5.1.1 Identify tools and equipment needed in preparing dessert;
- 5.1.2. Give the importance of dessert in a meal;
- 5.1.3. Classify dessert according to types of ingredients used; and
- 5.1.4. Give the characteristics of desserts.

Tools, equipment, and utensils needed in preparing desserts/sweets

Everyone should be familiar with the tools, equipment and utensils needed in preparing desserts. Every pastry chef must have these tools, utensils, and equipment for efficient preparation of desserts. Each tools is designed to perform a specific job in the kitchen.

Measuring cup and spoon. Used for measuring dry and liquid ingredients.

Mixing bowl is used for mixing ingredients. It comes in different sizes: small, medium, and large.

Can opener is used to open food containers

Cutting board is a wooden or plastic board where fruits and vegetables are cut

Double boiler is used when temperatures must be kept below boiling, such as for egg sauces, puddings, and to keep foods warm without overcooking.

Funnels are used to fill jars. They are made of various sizes of stainless steel, aluminum, or plastic

Graters are used to grate, shred, slice and separate foods such as carrots, cabbage and cheese

Kitchen Knives are often referred to as the cook's or chef's knife. They are used for peeling and slicing fruits and vegetables

Fruit and salad knife is used to prepare salad greens, vegetables, and fruits

Spatula is used to level off ingredients when measuring and to spread frostings

Citrus knife is used to section citrus fruits. The blade has a two-sided, serrated edge.

Paring knife is used to core, peel, and section fruits and vegetables. The blades are short, concave with hollow ground

Kitchen Shears are practical for opening food packages, cutting tape or string to package foods or simply to remove labels or tags from items.

Scraper is a rubber or silicone tools to blend or scrape the food from the bowl; metal, silicone or plastic egg turners or flippers

Spoons are solid, slotted, or perforated. They are made of stainless steel or plastic. The solid ones are used to spoon liquids over foods and to lift foods, including the liquid out of the pot

Temperature Scales are used to measure heat intensity. Different thermometers are used for different purposes in food preparation – for meat, candy or deep-fat frying

Vegetable peeler is used to scrape vegetables, such as carrots and potatoes and to peel fruits. The best ones are made of stainless steel with sharp double blade that swivels

Whisks for Blending, Mixing are used for whipping eggs or batter, and for blending gravies, sauces, and soups. The beaters are made of looped steel piano wires which are twisted together to form the handle.

Wooden spoons continue to be kitchen essentials because of their usefulness for used for creaming, stirring, and mixing. They are made of hard wood.

Baking pan. One cannot bake without bakeware. Baking pans like loaf pans, cake pans, pie plates, and baking sheets and so on are necessary for baking.

Reasons for eating desserts and sweets

- **Dessert balances out a meal** and gives —closure to the meal.
- **Eating dessert is an opportunity to experience** different flavors and textures that you cannot get in other foods like vegetables, meats, and fruits.
- Dessert can be an opportunity to be creative you can make interesting mixtures that you otherwise may not have thought of.
- Dessert isn't —fattening Remember, there is no such thing as a fattening food

- It will make you feel like a kid again. Forget anti-aging creams or long and sweaty workout sessions at the gym, the fastest way to recapture your youth, or embrace a more youthful spirit is to eat like a kid
- It is romantic. Desserts are designed for romance. After all, you can't really order a salad with two forks. But, when it comes to cake, that is a different matter.
-

Classification/types of desserts and their characteristics

- A. **Fruits** - The simplest dessert and one of the best are fruits because they are nutritious, appetizing, and easy to prepare and serve.

Characteristics of good fruit desserts:

- appetizing aroma

- simple
- clean washed appearance
- slightly chilled

B. **Cheese.** Cheese is another excellent dessert that is ready to serve. It is made in all parts of the world from a variety of milks from cow, goat and sheep. Cheese differs depending on the kind of milk used, the kinds of cheese-making procedures, the seasonings and the ripening processes also distinguish its variety. Each variety has a definite character, a special appeal and particular uses.

The three general types of cheese based on consistency are:

1. Soft

- unripen cheese
- ripened by bacteria

2. Semi – hard

- ripened by mold
- ripened by bacteria 3

3. Hard

- with gas holes
- without gas holes

C. Gelatin Dessert – These are easily prepared, economical and vary in many ways. Gelatin is marketed in two forms. First, the unsweetened, granular type that must be softened in water before use, and the fruit gelatin to which flavor, color, and sugar have already been added.

D . Custard- Custard Baked and soft custards vary in so many ways. Creamy, delicate, baked custards may be served in their baking cups or may be unmolded and served with fruit garnishes or with dessert sauces.

Characteristics of baked custard

- firmness of shape
- smooth, tender texture
- rich and creamy consistency
- excellent flavor

Characteristics of soft custard

- velvety smooth texture
- rich flavor
- has pouring consistency of heavy cream

E. Puddings- are relatively simple to prepare and vary with sauces. These are classified as: - Cornstarch pudding, sometimes called blancmange - Rice pudding - Bread pudding

Characteristics of Pudding

- attractive appearance
- excellent consistency
- well – blended flavor
- firmness of shape
- an accompanying sauce to add interest

F. Fruit Cobblers -These are not fruit pies. They have a depth of two or three inches and are topped with biscuit dough rather than being made with pie crust. They may be served either hot or cold.

G. Frozen Desserts

1. ***Ice cream***- smooth frozen mixture of milk, cream, sugar, flavorings and sometimes eggs.

2. ***Sherbet and Ices*** – made from fruit juices, water and sugar. American sherbet contains milk and cream and sometimes egg white. The egg whites increase smoothness and volume. Ice contains only fruit juice water, sugar and sometimes egg white.

3. ***Frozen Soufflés and Frozen Mousses*** Made like chilled mousses and Bavarians, whipped cream, beaten egg whites or both are folded to give lightness and allow to be still frozen in an ordinary freezer.

LEARNING OUTCOME 2:

**PREPARE DESSERTS AND
SWEET SAUCES**

Objectives

At the end of this lesson, students are expected to:

- 5.2.1. Identify ingredients for desserts;
- 5.2.2. Select and prepare sweet sauces;
- 5.2.3. Prepare variety of desserts and sauces using sanitary practices; and
- 5.2.4. Follow workplace safety procedures.

There are a wide variety of ingredients that may be used in the preparation and cooking of cold and hot desserts. Some of the most common ingredients include

Ingredients needed in preparing desserts and sweet sauces

Sugar The common element linking virtually all desserts is sugar. It may be used to sprinkle over fruit, beaten into egg yolks for custard or into white's for meringue. Many desserts use sugar syrup, which involves boiling sugar and water to the desired temperature.

Gelatin is used to set many cold molded desserts. It is the basis for jellies and is also used to set creams and mousses. Egg yolks may be mixed with flavorings, sugar and cream or milk to make custard or they may be whisked together over hot water to create a sabayon

Egg whites when raw egg whites are beaten, air is trapped in the mixture in the form of bubbles. Egg whites beaten to soft peaks will support soufflés and mousses while whites beaten to firm peaks are suitable for meringues.

Fruit Ripe perfect fruit provides the basis for many desserts, with very little effort needed to make an attractive colourful display. Fruit may be pureed, baked or poached and can then be used for pies, soufflés and puddings.

Cream This ingredient is often used as a decoration or accompaniment for both cold and hot desserts, but may also be used as one of the recipe ingredients. Whipped cream may also be used as an effective layer for trifle. Cream may be combined with rice, sugar and milk to make a delicious rice pudding.

Batters This simple mixture of flour and water is used to make crepes and pancakes. Batter is also used to coat fruit for fritters. Nuts are available whole, ground, roasted or caramelized. They are an important part of dessert cookery as they provide flavour for creams and ice creams.

Chocolate may be melted to easily blend into fillings and batters. It can also be poured over desserts such as cakes and puddings. When melted chocolate is cooled it can be shaped and moulded into many attractive decorations.

Quality

Many recipes will specify the type and quality of the ingredients required. It is important that you observe these requirements if you are to achieve quality desserts.

Quality points to look for when selecting dessert ingredients.

Ingredients

QualityPoints

Sugar

- **Granulated sugar** is used in most recipes.
- **Castor sugar** is best for meringues and some cakes □ because it dissolves more easily.
- **Confectioner's sugar** or icing sugar is used mostly for dusting the tops of desserts.
- **Brown sugar** is commonly used in hot sauce as it produces a lovely rich caramel flavour.

Gelatin

- Many desserts are prepared using commercial leaf or powdered gelatin.
- Gelatins may be plain or flavored and colored for effect.

Egg yolks

- Take eggs out of the refrigerator prior to use so they are at room temperature. This way they will whisk up better and incorporate more air.

Egg whites

- Egg whites should be fresh and a grade quality.
- They may be purchased in bulk frozen or you may freeze them in small quantities if you have excess.
- If egg whites have not been cleanly divided and contain traces of yolk, they will not whip up to satisfactory foam. A pinch of salt helps the whites to whip up better

Cream

- The characteristics of cream will differ according to whether it is pure cream, double cream, reduced cream or cream that has had a stabilizer or gelatin added to it to make the texture seem thicker and improve the whipping qualities.

- Creams vary in taste and texture so choose according to recipe specifications.
- Used only pasteurized cream.
- Pay particular attention to use-by dates.

Batter

- Batters should be made up from the fresh ingredients.
- Batter is often rested at room temperature after it is made to reduce its elasticity so that it flows more freely over the pan.
- Batters can be flavored with vanilla and other spices.

Nuts

- Nuts may be purchased natural or blanched.
- Freshness is always important. Keep nuts well wrapped and store in refrigerator to prevent the oils in the nuts becoming rancid.
- If you require toasted nuts, toast them yourself to ensure the nuts are fresh in the first place.

Chocolate

- Chocolate is available in various types, namely bitter sweet, semi-sweet, white, dark and milk chocolate.
- Milk and white chocolate because of their milk content are more difficult to work with than dark chocolate

Sweet Sauces

Sauce - a flavored liquid blend of ingredients that adds flavor and enhances the **appearance of the food.**

Fudge - a soft confection made of butter, sugar, chocolate. Sauces can give an entirely different appearance, flavor, color, and moisture to

Kinds and Varieties of Sauces

1. Rich sauce is well suited to a simple dessert.
2. Light sauce is suited to a rich dessert.
3. Hot fudge is a delightful contrast to a cold cornstarch pudding or to vanilla ice cream.
4. Hot sauces are made just before they are to be used.

5. Cold sauces are cooked ahead of time, then cooled, covered and put in the refrigerator to chill.

Thickening Agents for Sauces

Thickening agents improve the quality of the sauces.

- | | |
|-----------|---------------|
| 1. Starch | 5. Flavor |
| 2. Cream | 6. Grains |
| 3. Eggs | 7. Cornstarch |
| 4. Rice | |

Most dessert sauces fall into one of three categories:

1. Custard Sauces -Vanilla custard sauce, Chocolate or other flavor may be added to create varieties.
2. Fruit Purees -These are simply purees of fresh or cooked fruits, sweetened with sugar. Other flavorings and spices are sometimes added.
3. Syrups - Includes such products as chocolate sauce and caramel sauce.

Guidelines in Preparing Vanilla Custard Sauce

1. Use clean, sanitized equipment and follow procedure.
2. When combining the egg yolks and sugar, whip the mixture as soon as the sugar is added. Letting the sugar and egg yolks stand together without mixing creates lumps.
3. Scald milk before combining with the yolks.

4. Slowly beat the hot milk into the beaten eggs and sugar.
5. Place bowl with egg mixture in a pan of simmering water and stir constantly to prevent curdling.
6. To test for doneness, the mixture lightly coats the back of the spoon.
7. Immediately cool the sauce by setting the pan or bowl in ice water. Stir occasionally to cool evenly.
8. If the sauce curdles, immediately stir in one (1) to two (2) ounces cold milk, transfer the sauce to a blender, and blend at high speed.

Storage of Sauces

Sauces should be kept in airtight containers and stored in a cool dry place away from moisture, oxygen, light and pests. Food made with starches that contain egg, milk, cream and other dairy products are prone to bacterial contamination and to food-borne illness. Sauces made with these ingredients should be kept out of the temperature danger zone. Thickened sauce should also be prepared, served and stored with caution. These products should be stored in the refrigerator and never left to stand at room temperature too long.

CREAMY GELATIN

Ingredients

- 1 1/2 cup gelatin red, yellow, and green jelly cooked according to package instructions and cubed
- 1 1/4 cups whipping cream
- 1 1/2 cups pineapple juice
- 1 can condensed milk
- 14 oz. 4 packets unflavored gelatin colorless

Procedure

1. Heat the pineapple juice in the microwave oven for 35 seconds.
2. Pour in a mixing bowl. Add the colorless unflavored gelatin. Stir until the gelatin completely dilutes in the juice.
3. Pour the whipping cream in the bowl and then add the condensed milk. Stir until well blended.
4. Add the colored jelly cubes. Stir.

5. Pour the mixture in a Jelly mold large enough to hold everything.
6. Refrigerate for 4 hours.
7. Transfer to a plate. Slice and serve.
8. Share and enjoy!

CHOCOLATE MOUSSE

Ingredients

4 large egg yolks
¼ cup sugar
2 ½ cups heavy whipping cream
8oz semisweet baking chocolate, chopped

Procedure

1. Beat egg yolks in small bowl with electric mixer on high speed about 3 minutes or until thick and lemon colored. Gradually beat in sugar.
2. Heat 1 cup whipping cream in 2-quart saucepan over medium heat until hot. Gradually stir at least half of the hot whipping cream into egg yolk mixture; stir back into hot cream in saucepan. Cook over low heat about 5 minutes, stirring constantly, until mixture thickens (do not boil). Stir in chocolate until melted. Cover and refrigerate about 2 hours, stirring occasionally, just until chilled.

3. Beat 1 1/2 cups whipping cream in chilled medium bowl with electric mixer on high speed until stiff. Fold whipped cream into chocolate mixture. Pipe or spoon mixture into serving bowls. Refrigerate until serving.

MANGO TAPIOCA

Ingredients:

2 cups water
¼ cup small tapioca pearls
5 ripe mangoes
½ cup evaporated milk
¼ cup sugar

Procedure

1. In a large pot over medium heat, bring water to a boil. Add tapioca pearls and cook, stirring regularly, for about 7 to 10 minutes. Turn off heat and cover. Let tapioca pearls stand in hot water until translucent and cooked through. In a colander, rinse cooked sago under cold running water to remove excess starch. Drain well and let cool completely. This would be about 1 cup cooked sago.

2. Peel mangoes and cut flesh from pits. Cube the flesh of four mangoes. Dice the flesh of the remaining 1 mango and set aside to use as garnish.
3. In a blender or food processor, combine cubed mango flesh from the 4 mangoes, evaporated milk and sugar. Process until smooth and thick.
4. Combine mango puree and sago. Chill in the refrigerator until ready to serve
5. Divide mango sago into serving bowls and garnish with diced mangoes. Serve immediately.

CATHEDRAL WINDOW

Ingredients:

1 1/2 cup flour
1 teaspoon baking powder
8 pieces egg yolks
1 3/4 cups sugar
1 big can fruit cocktail about 30 ++ ounces
2 tablespoons unflavored gelatin
4 cups milk
1/3 cup butter
1 1/2 tsp vanilla extract
2 1/4 cups water

Instructions

1. Make the Sponge Cake by sifting the baking powder and 1 cup flour using a flour sifter. Set aside
2. Put 4 egg yolks in a mixing bowl and then beat until texture becomes thick.

3. Add-in 1/2 cup sugar gradually while beating the egg
4. Slowly add the sifted flour and baking powder mixture. Mix the ingredients thoroughly.
5. Combine 1 cup milk, butter, and vanilla extract in a sauce pan then cook until butter melts
6. Pour the cooked mixture (milk, butter, vanilla extract) into the mixing bowl and mix with the existing concoction until evenly distributed
7. Preheat the oven at 350 degrees Fahrenheit
8. Pour the combined mixtures in a baking pan then bake for 23 minutes or until sponge cake is ready. Set aside.
9. Make the simple syrup by heating a saucepan and placing 1/4 cup sugar.
10. Add 1/4 cup of water immediately and cook until the sugar completely dissolves then let cool for a few minutes
11. Pour the simple syrup on top of the sponge cake and then spread. (I spread the syrup using a brush)

12. Make the custard by combining 1/2 cup flour, 1 cup sugar, and 3 cups milk in a saucepan then cook while stirring until the mixture thickens
13. Put half of the cooked mixture on the bowl where the 4 egg yolks are placed and then mix well
14. Put everything back in the saucepan with the rest of the ingredients. Mix until texture is thick enough (this is now the custard)
15. Apply the layer of custard evenly on top of the Sponge cake
16. Drain the liquid concentrate from the fruit cocktail and set aside.
17. Arrange all the fruits on top of the custard layer. Make sure to place them evenly
18. Dilute the gelatin in 2 cups of water
19. Heat the saucepan then pour the diluted gelatin and fruit cocktail concentrate and bring to a boil
20. Immediately after boiling, turn off the heat and let cool down until temperature is a little above normal room temperature

21. Pour the gelatin mixture on top of the fruit cocktail layer
22. Refrigerate (preferably overnight)
23. Serve chilled for dessert. Share and Enjoy!

ICE CREAM

Ingredients:

1 package (15-1/2 ounces) Oreo cookies, crushed, divided
1/4 cup butter, melted
1/2 gallon vanilla ice cream, softened
1 jar (16 ounces) hot fudge ice cream topping, warmed
1 carton (8 ounces) frozen whipped topping, thawed

Procedure:

1. In a large bowl, combine 3-3/4 cups cookie crumbs and butter. Press into a greased 13x9-in. dish. Spread with ice cream; cover and freeze until set.
2. Drizzle fudge topping over ice cream; cover and freeze until set. Spread with whipped topping; sprinkle with remaining cookie crumbs. Cover and freeze 2 hours or until firm. Remove from the freezer 10 minutes before serving.

LEARNING OUTCOME 3:

PLATE / PRESENT

DESSERT

Objectives

At the end of this lesson, students are expected to:

5.3.1. Identify the accompaniments of desserts;

5.3.2. Present desserts attractively; and

5.3.3. Identify factors to consider in plating and presenting desserts.

Accompaniments, Garnishes and Decorations for Desserts

Dessert Syrup

Flavored simple syrup use to moisten cakes. Flavorings maybe extracts like vanilla, liquors like rum. Add flavorings after the syrup has cold, flavor may lost if added to hot syrup. Lemon or orange rind may also add flavor to syrup

Cream Anglaise

Stirred vanilla custard sauce; consists of milk, sugar, egg yolks and vanilla stirred over low heat until lightly thickened.

Pastry Cream

Contains starch as well as eggs, resulting in a much thicker and more stable product. It is used as a cake and pastry fillings for cream pies and pudding. With additional liquid, it is used as custard sauce.

Custards

Consist of milk, sugar, eggs and flavorings. (Whole eggs are used for greater thickening power). Used as pie fillings, as a dessert by itself and as a basis for many bake puddings.

Art of Dessert Plating

Desserts should turn heads in the dining room. Garnishing and plating desserts shouldn't be an afterthought. It should be an integral part of how you build your recipe.

Garnishes that add attraction

Nut Garnish

Fruits Garnish

Chocolate Garnish

Cookie Garnish

Guidelines in plating dessert:

1. Make garnishes edible. Everything on the dessert plate should be edible and delicious.

2. Keep it clean and simple. Don't crowd the plate. If your dessert is beautiful, it shouldn't need a lot of garnishes. And keep the rim of the plate clear, so the servers aren't touching the food when they place the desserts in front of the customers.

3. Make your garnishes relate to the dessert on the plate. The only time you should garnish with fresh mint is if you're serving mint ice cream. Don't put it on there just because you think the dessert needs color. If you have a brown dessert, like apples in puff pastry, then make sure all of those elements are executed well—puff pastry should look beautiful and crisp.

4. Layer flavors and textures in your dessert. Textures and flavors hit the palate at different times. Ask yourself, "How can I make this better?" If the answer is a little lemon zest, then add it as a garnish. All the components on the plate should build on the dessert, making it better. Nut Garnish Fruits Garnish Chocolate Garnish Cookie Garnish 99

5. Try different plates—various sizes and shapes. The right plate can add or enhance the theme really well.

Plating and presenting tips and techniques

There are many factors and techniques to consider in food plating that affect the overall appearance of a dessert. Applying one of the tips may enhance presentation.

1. *The plate* – when plating desserts, the choice of plate is critical to the final presentation. Remember, the plate is the frame of the presentation. There are many sizes, shapes, and colors available. Choosing the right size of plate is important because food should not be crowded onto the plate.

2. *Color* - always consider color as an important part of plate presentation. Always try to have a variety of colors on the plate. Green is fresh and cool, and can be soothing.

- Red is passion and excitement.
- Black is sophisticated and elegant.

- Blue is a natural appetite suppressant, since it can make food look unappetizing.

3. *Texture* - texture is critical to food presentation, as well as enjoyment. Contrasting hard and soft, smooth and coarse, adds visual interest to your food, and it will enhance your customers' enjoyment to the food.

4. *Keep things clean* - Remember that neatness counts. Food should be contained within the rim of the plate, yet it should not be crowded in the center. Take a look at the plate and ask yourself if it is pleasing to the eye. It should not look sloppy and dirty.

5. *Garnish to Impress*. Garnishes and decorations can enhance your plate presentation. Choose garnishes that are appropriate to the ingredients. For example, using a chocolate

curls for chocolate cake. Here are some other techniques to keep in mind when garnishing:

- Never decorate a plate with something inedible
- Ensure the garnish complements and enhances the dish
- Choose garnishes that are the correct size; they should be easy to eat

LEARNING OUTCOME 4:
STORING DESSERT

Objectives

At the end of the lesson, student are expected to store or to package dessert

Storing cold and hot dessert

As many dessert contain egg and dairy product, they present a potential health hazard if not stored properly

REMEMBER: Proper storage means cooled dessert must be covered with plastic or placed in lidded container before storing in cool room.

- ✓ Dessert containing uncooked eggs should be handled with extreme care, as raw egg is a medium in which dangerous bacteria such as salmonella can thrive. This means you need to be really careful with food like chocolate mousse and uncooked cheese cake that contain egg white for a gelatin.

- ✓ Egg custard contain protein, which provides good for bacteria that are present in the custard can grow quickly, bacteria that are present in the custard can grow quickly to dangerous numbers
- ✓ Any dessert that is not required for immediately consumption must be cooled rapidly and stored in the cool room required.
- ✓ If you plan to prepare dessert hot until service, make sure that the temperature of the food is over 65‘c. Never leave an egg mixture in Bain- Marie for a while should be discard at the end of service.

- ✓ If milk and cream are used in dessert like trifle and custard, they must not be left to stand at room temperature for any length of time. They should be kept in the refrigerator until the last possible moment to prevent the risk of food poisoning.
- ✓ Many dessert have limited storage life. Make sure you check with your supervisor and follow organizational requirement.

Packaging Materials for Storing Dessert

1. Glass Container
2. Plastic Container
3. Plastic / Cellophane
4. Aluminum Foil

Equipment

1. Chiller
2. Freezer
3. Refrigerator
4. Package Tapes
5. Boxes
